A directionally cloned cDNA library in the pSPORTI vector (Life Technologies) was constructed at Bioserve Biotechnology (Laurel MD) essentially following the protocols of the SuperScript Plasmid System full details of which are contained in the manufacturer's Instruction manual (http://www.lifetech.com/). First strand synthesis was carried out using a Not I primer-adapter [5'-pGACTAGTTCTAGARCGGGCCCCC(T)15-3']. EST analysis was performed on the unamplified library at the NIH Intramural Sequencing Center (NISC)."

The decapped intact mRNA was ligated with DNA-RNA linker including EcoR I site by treatment of TA RNA ligase and the first strand CDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The cDNA vector was circularized with E. coli DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand course of the coll was the strand the day of the strand the strand the day of the strand the strand the day of the strand the stra
                                                                                                                                                                   converted to a DNA strand by Okayama Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli ToplOF by electroporation method The cDNA libraries constructed by this method are full-length enriched cDNA library."

Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library went through one round of normalization. "
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   normalization.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC (AAA97775-A95789), and compositions comprising them are useful for the CC diagnosis, treatment or prevention of immunological disorders. CC infections and cell proliferative disorders, including cancer. The IMOL CM may be used to treat or prevent disorders associated with decreased CC (e.g. inflammation, actinic keratosis, AIDS, Addison's disease), CC (e.g. inflammation, actinic keratosis, AIDS, Addison's disease), CC haematopoletic cancer, infections caused by virus (e.g. daenovirus, coronavirus), bacteria (e.g. Staphylococcus, Streptococcus, Singella), fungi (e.g. Aspergillus, Blastomyces), parasites (e.g. Plasmodium, Trypanosoma, intestinal protozoa), cell proliferative CC disorders (e.g. actinic keratosis, arteriosclerosis, bursitis), and CC cancers (e.g. leukemia, melanoma, sarcoma). The peptides are also CC specifically recognizes these peptides. The polynucleotides may be used for detect and quantify gene expression in biopsied tissues in which CC expression of IMOL may be correlated with the disease, as targets in a CC compounds in drug screening techniques. Antibodies which specifically compounds in drug screening techniques. Antibodies which specifically be used for the diagnosis of disorders characterized by expression of IMOL, or in assays to monitor patients being treated cc with IMOL or agonists, antagonists, or inhibitors of IMOL.

                                                                                                                                                                                                                                                                                                                                       anorexia, and conditions associated with these disorders. Due to its Clq like domain, zacrp3 and zacrp3-containing fusion proteins may be useful as antimicrobial agents, promoting lysis or phagocytosis of infectious organisms such as bacteria or viruses. Zacrp3, its fragments, fusion proteins, antibodies and activity modulators may also be used to inhibit collagen-induced platelet aggregation, adhesion, or activation, and may therefore have potential for promoting blood flow within the vasculature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to the human zacrp3 protein (AAB29580) and to nucleic acids which encode it (AAC64058, AAC64063). Zacrp3 is a homogue of adipocyte complement related protein (ACRP30) and contains a collagen-like domain comprising Gly-Xaa-Xaa or Gly-Xaa-Pro repeats, and a c-terminal Clq domain comprising 10 beta-strands. The zacrp3 gene is located on chromosome 5p12. The invention also relates to zacrp3 fragments, fusion proteins containing zacrp3 polypeptides, zacrp3-specific antibodies, expression constructs and host cells comprising zacrp3 nucleic acids, and methods of recombinant production of zacrp3. Human zacrp3, and its agonists and antagonists may be used in the study and modulation of cellular metabolism and energy balance in mammals, and may therefore be used to treat disorders such as obesity and mammals, and may therefore be used to treat disorders such as obesity and mammals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cellular metabolism; metabolic disorder; obesity; anorexia; antimicrobial agent; infection; platelet aggregation inhibition; adhesion; activation; vascular injury; antibacterial; antiviral.
                                                                                                                                                                                                                                                                                                  of a mammal e.g., to treat injury to the vasculature or other collagenous tissue. Human zacrp3 and its antibodies may additionally be used to study

                                                                                                                                                                                                              The present sequence represents a secreted or transmembrane polypeptide. CC The specification describes polypeptides designated PRO1484, PRO4334, CC PRO1122, PRO1889, PRO1889, PRO1887, PRO4785, PRO4355, PRO4355, PRO4356, PRO4356, PRO4350, PRO4350, PRO4356, PRO4356, PRO4350, PRO4424, PRO4408, PRO5737, PRO4405, PRO5737, PRO4405, PRO5737, PRO4405, PRO5737, PRO4405, PRO5737, PRO4405, PRO5900, CC PRO6030, PRO4424, PRO4402, PRO4409 and PRO4409. PRO1889 polypeptide is CC useful for diagnosing tumour in amammal. The polypeptides, their CC expression or activity of the polypeptide. Conditions treated include CC expression or activity of the polypeptide. Conditions treated include CC expression or activity of the polypeptide. The polypeptides are CC capable of inducing proliferation of mammalian kidney mesangial cells and are therefore useful for treating kidney disorders associated with CC decreased mesangial cell function such as Bergers disease or other CC mephropathies associated with Schonlein-Henoch purpura, cellac disease, CC dermatitis herpetiformis or Crohns disease. The nucleic acids may be used to generate transgenic animals for use in development and screening of CC therapeutically useful reagents and also for chromosome identification and tissue typing.
                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 27 APR 1999

                                                                                                                                                                                                                                                    protein/membrane protein expression. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays (e.g. polymerase chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples. They may also be used to study the expression and function of secretory proteins/membrane polypeptides and their role in metabolism. The polypeptides may be used as antigens in the production of antibodies against them and in assays to identify modulators (agonists and antagonists) of expression and activity. The antibodies and antagonists may also be used as therapeutic agents to down regulate expression and activity. The antibodies agents for detecting the presence of the polypeptides in samples (e.g. by enzyme linked immunosorbant assay (ELISA). Examples of diseases which may be treated include rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     which encode human secretory or membrane proteins represented by AAB88317 - AAB88419. Included in the invention are primers AAB88317 - AAF824295 and AAAF62232 - AAF62235 which are used to isolate to CDNA sequences of the invention. The invention also includes methods for the production of antibodies directed against the proteins, and cDNA sequences, which can be used in vaccines. The polynucleotide sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 can be used in gene therapy. The polynucleotide sequences and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate secretory
                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acids encoding secretory proteins/membrane proteins, useful in gene therapy or as candidate target molecules in drug development -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ota T,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (HELI-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         07-JUL-2000; 2000EP-0114090
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               EP1067182-A2

The sequences of the invention are useful for treating, preventing ameliorating various diseases such as inflammatory disorders (e)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to the human zacrp3 protein (AAB29580) and to concleic acids which encode it (AAC64058, AAC64063). Zacrp3 is a homogue cof adipocyte complement related protein (ACRP30) and contains a ccollagen-like domain comprising Gly-Xaa-Xaa or Gly-Xaa-For repeats, and a ccollagen-like domain comprising 10 beta-strands. The zacrp3 gene is ccollagents fusion proteins containing zacrp3 polypeptides.

CC cacrp3-specific antibodies, expression constructs and host cells cc comprising zacrp3 nucleic acids, and methods of recombinant production of cc zacrp3. Human zacrp3, and its agonists and antagonists may be used in the cc study and modulation of cellular metabolism and energy balance in cc mammals, and conditions associated with these disorders such as obesity and anorexia, and conditions associated with these disorders may be useful cc as antimicrobial agents, promoting lysis or phagocytosis of infectious corganisms such as bacteria or viruses. Zacrp3, its fragments, fusion cc largen. Induced platelet aggregation, adhesion, or activation, and may coff and may coff and may coff and the collagen-induced platelet aggregation, adhesion, or activation, and may coff and may coff and the collagen.
